SENSTAR™

Senstar Symphony Device Pack

3.3
Release Notes

Contents

Release 3.3.0 (October 2022)

Improvements

Issue ID	Description
PACK-4717	The Senstar Symphony Server supports HTTPS for proxy calls with ONVIF Profile T.
PACK-6392	The Senstar Symphony Server supports the Hanwha SUNAPI 2.5.9 interface.
PACK-6503	The Senstar Symphony Server clears the buffer if too much audio is buffered and prevents audio out from working on the camera.
PACK-6507	The Senstar Symphony Server includes the calibration XML for the Bosch 5000 and Bosch 5100i fisheye cameras.
PACK-6554	PTZ movements are consistent and accurate for cameras added using ONVIF.
PACK-6559	Audio out on cameras added with ONVIF works more effectively using the G.711 audio codec.

Fixes

Issue ID	Description
PACK-5933	Alarms from the Senstar ONVIF Server appear as expected in the alarm log and the timeline in the Senstar Symphony Client interface.
PACK-6394	The Senstar Symphony Server recognizes the Bosch FLEXIDOME 70001 camera as a multi-lens camera.
PACK-6491	You can use PTZ cameras with the Hanwha SPE-1610 encoder.
PACK-6504	You can add ONVIF H.265 cameras that use non-standard communication ports to the Senstar Symphony Server.
PACK-6565	The Senstar Symphony Server connects as expected to cameras after you install an HTTPS certificate on the camera.
